PROFESSIONAL SUMMARY

Full-stack software developer with experience in delivering complete web projects using modern frontend and backend technologies. I focus on writing clear, maintainable code and delivering consistently while ensuring reliable performance. I approach problems practically and work well with various teams, contributing to UI, APIs, and databases throughout the development process.

EDUCATION

Indore institute of Science and Technology (8.87/10)

August 2019 – June 2023

Bachelor of Technology, Computer Science Engineering | *Indore, India*

SKILL SUMMARY

- **Languages:** HTML, CSS, JavaScript, Typescript
- **Frameworks and Libraries:** ReactJS, NodeJS, ExpressJS, NextJS, Socket.io, TailwindCSS, Shadcn, Strapi
- **Database and ORM:** PostgreSQL, MongoDB, Mongoose, Prisma, Redis
- **Tools:** GitHub, Git, Figma, AWS, Docker, Postman

ACHIEVEMENTS/CERTIFICATIONS

- **SIH (Smart India Hackathon) 2022 Winner**
- **Claude code in action**
- **Introduction to Claude Cowork**

PROFESSIONAL EXPERIENCE

Comity Hub

July 2025 – February 2026

Full Stack Developer

Delhi, India

- Rebuilt auction platform for refurbished electronics from legacy Java/Laravel stack to Next.js + Express.js + PostgreSQL, implementing real-time bidding, bulk listing management, and architecture for Salesforce integration.
- Architected and deployed full-stack Learning Management System using Next.js, Strapi CMS, and PostgreSQL on AWS, delivering Salesforce tutorial content to streamline vendor onboarding and reduce user support bottlenecks
- Independently managed complete software development lifecycle across both platforms—UI/UX design, frontend development, RESTful API design, database architecture (PostgreSQL), and production deployment (LMS)—while collaborating with legacy development team for business logic validation.
- Configured dual-environment AWS infrastructure (2 EC2, S3, PostgreSQL RDS, IAM role-based access); reduced monthly AWS spend by stopping non-production instances when not in active use and using Elastic IPs to preserve endpoints across restart cycles.

Keenagile

December 2024 –Jun 2025

Web Developer Intern

Remote, India

- Developed multiple campaign-specific landing pages for healthcare marketing clients using HTML, CSS, JavaScript, React, Bootstrap, and Tailwind CSS, creating targeted conversion paths from social media ads to specialized content pages addressing patient-specific concerns
- Built responsive, mobile-optimized web interfaces for Instagram/Facebook ad campaigns supporting healthcare providers, clinics, and wellness businesses across India in fast-paced startup environment.
- Collaborated with senior developers to implement design updates and client modifications using Git/GitHub for version control, ensuring code quality and rapid deployment of marketing assets

PROJECTS

Whisper × Terminal47 (Dual-Mode Real-Time Chat Platform)

[\(Link\)](#)

- Built a dual-mode chat platform using React, Next.js, Express, Socket.IO, MongoDB, and Redis — supporting persistent authenticated chats and ephemeral end-to-end encrypted rooms.
- Designed an optimistic UI with Zustand for instant message rendering, backed by Socket.IO and Clerk-secured JWT middleware for scoped real-time events.
- Architected ephemeral rooms with Redis-based time expiry, enforcing zero data retention and no authentication for private conversations launched from the main app.
- Implemented Node.js native clustering on the backend with CPU-aware worker provisioning (`os.cpus().length`) and automatic respawn on worker exit; identified sticky sessions and a Redis adapter as next steps for scaling WebSockets across workers.
- Deployed the ephemeral service on AWS EC2 with HTTPS via Caddy reverse proxy and Let's Encrypt SSL, supporting WebSocket traffic and production-grade infrastructure.

Learning Management System (LMS) Platform

[\(Link\)](#)

- Built a full-stack LMS using Next.js, Express, and TypeScript with **role-based dashboards (creator/user)**, enabling course creation, media uploads, and structured content delivery.
- Integrated **authentication (Clerk) and payments (Stripe)** to support real transactions, secure user access, and purchase workflows.
- Designed scalable backend using **Amazon DynamoDB** and deployed via **AWS Lambda**, with media storage on **Amazon S3** and global delivery through **Amazon CloudFront**.

DocTrack & NDEAR Portal (Ministry of Education)

- Problem statement issued by the Ministry of Education, India. Source code and live site are under restricted access and not publicly available.
- Won Smart India Hackathon 2022 for a solution addressing the Ministry of Education's problem statement around reducing administrative load on school teachers and faculty.
- Developed an AI-powered OCR mobile app enabling teachers to scan and auto-upload attendance, meal records, and fee receipts, replacing repetitive manual data entry with a single-tap capture flow.
- Built a centralized web portal for Department of School Education & Literacy officials to monitor school-level data, manage staff credentials, and track budget utilization across multiple districts.
- Implemented role-based access control and automated document processing pipeline using React.js, Node.js, Express.js, and OCR technology.
- Designed data visualization dashboards enabling policy-makers to analyse resource allocation and improve transparency in education administration
